# SIEM

## Advanced Threat Detection & Continuous Compliance for MSPs

**todyl**

## The Challenge

MSPs need to protect their clients from increasingly sophisticated security threats while also helping them meet increasingly strict compliance requirements. Yet traditional SIEM solutions are too complex, too noisy, and too expensive, making them difficult to deploy and manage efficiently. MSPs need a scalable, intelligent, and cost-effective way to detect and respond to security events and advanced threats, while delivering the data retention and reporting that their clients need to comply with a growing number of regulations.

## The Solution

Todyl delivers a managed, cloud-native SIEM platform that is optimized for MSPs, combining real-time threat detection, automated correlation, and compliance reporting in a single, easy-to-manage and cost-effective solution.

- **Advanced Threat Detection:** Deploy ML-driven advanced analytics to reduce alert fatigue and rapidly detect anomalies and security incidents in real time.

- **Integrated Case Management:** Respond faster with fully contextualized in-case correlation, automated MITRE ATT&CK mapping, and recommended responses.

- **Built-in Compliance Solutions:** Simplify demonstrability for frameworks like HIPAA, PCI-DSS, and CMMC with pre-built reports and flexible data retention.

- **Flexible Data Retention:** Set data retention periods to match each individual tenant's requirements for compliance, internal auditing, and forensic investigations.

- **Streamlined Management:** Deploy a single agent and leverage multi-tenant control, policy automation, and seamless integration with your existing stack.

- **Simplified Deployments and Pricing:** Leverage low-cost packages and modular deployment options to simplify go-to-market and adapt to individual client requirements.
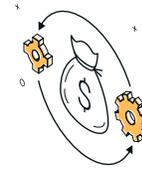

## Why MSPs Choose Todyl

Deep visibility and advanced analytics

Rapid development and simple configurations

Reduced operating overhead

Integrations to meet client requirements

Flexible data retention periods

Pre-built compliance packages

## The MSP Advantage

**Deliver Advanced Threat Intelligence:**
Protect clients with real-time attack detection, automated log analysis, and rapid response without the complexity of enterprise SIEM.
**Scale Efficiently & Profitably:**
Expand security services at your own pace with a flexible, subscription-based model that controls costs while boosting revenue potential.
**Reduce Operational Overhead:**
Deliver advanced anomaly detection, streamlined incident response, and compliance reporting in one platform to save time and resources.
**Enhance Client Security & Trust:**
Strengthen client relationships with proactive security monitoring that mitigates threats before they cause significant damage.

## SIEM Under the Hood

Todyl SIEM delivers enterprise SIEM and log management in a managed, cloud native platform to deliver the detection, response and compliance capabilities your clients need.

- Flexible retention periods meet any compliance requirements for log storage
- Single agent deployment simplifies management and reduces operating overhead
- Out-of-the box dashboards and reports make it easy to demonstrate compliance
- Over 500 anomaly detection rules deliver rapid visibility into advanced attacks
- Automated updates for detection rules ensure the latest threats are detected
- ML-driven cases automatically deliver comprehensive event context to any incident
- Multitenant architecture ensures MSPs can deploy the right solutions for any client
- Extensive integrations allow data collection and analysis data from relevant

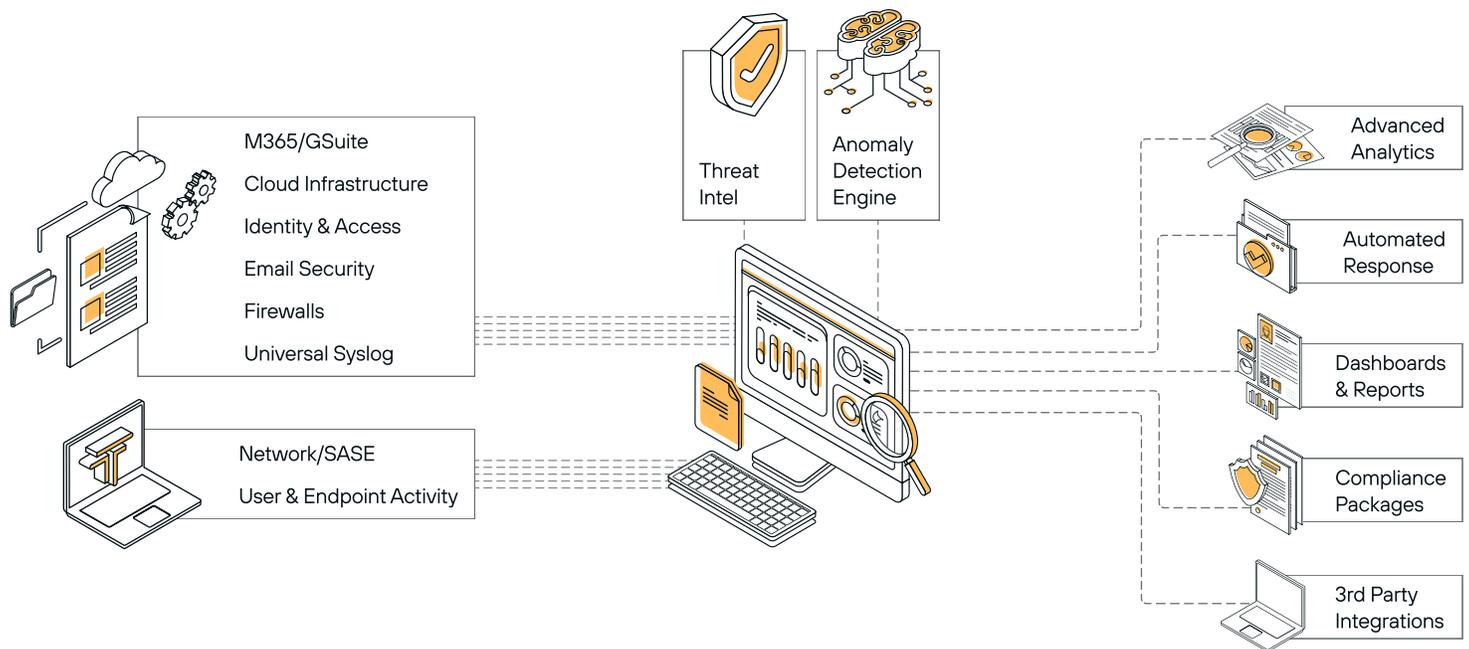

## Ready to Grow Your Cybersecurity Business?

Todyl enables MSPs to enhance security, ensure compliance, and scale efficiently. Let's talk about how you can deliver best-in-class security outcomes while expanding into new markets.
